Microsoft Services

Our Microsoft practice covers the entire development lifecycle for the Azure cloud, Microsoft Dynamics AX, Microsoft Dynamics CRM and the SharePoint Web platforms.

Data-Core's Microsoft team boasts technical certifications, expertise and experience in the latest Microsoft products, platforms and technologies. Our team has participated in large-scale projects for a number of leading U.S. corporations, with our innovative global delivery model reducing costs for our clients without compromising on quality.

Consulting Services

Data-Core Systems provides Microsoft .NET-based technology solutions for businesses through total project life cycle services. These services are executed within the customers' development framework or within Data-Core Systems' project framework. Our premier analysis and design processes have driven our success at creating mission critical applications and custom software systems in both the public and private sectors. The application integration component of the .NET framework allows disparate applications, which can be written in different programming languages and built on different architectures, to communicate with each other. The bulk of today's critical data and application programs reside on and use existing enterprise systems. Application integration allows web clients and servers to work together with this data and these application programs, seamlessly linking the strength of the internet with the strength of the enterprise.

Business Intelligence

Microsoft's SQL Server delivers mission critical performance across all workloads with in-memory built-in, faster insights from any data with familiar tools and a platform for hybrid cloud enabling organizations to easily build, deploy and manage solutions that span on-premises and cloud. SQL Server allows you to scale your business intelligence models, enrich and help secure your data while ensuring quality and accuracy with a complete business intelligence solution.

Data-Core's approach covers the entire spectrum of the data warehousing and business intelligence solution lifecycle. Our consulting services will help you define your business intelligence roadmap and performance management framework. Our application development services will enable you to realize your current and future information needs by helping you build a future-ready business intelligence platform. Our application maintenance and support services enable maintenance and evolution of existing business intelligence solutions.

Data-Core's business intelligence services include the following:

- Upgrades
- Migration
- Production Support
- Data Warehousing and Business Analytics: reporting, analysis, score carding and dashboards
- Data Quality and Availability

SharePoint

SharePoint offers across-the-board features to help your team share and store ideas and information — everything from streamlining common tasks to powering business intelligence to making it easy to keep track of what colleagues are doing.

Data-Core Systems has extensive experience with SharePoint. Our specialists can give you a firsthand look at the capabilities in the latest version of SharePoint and discuss how its unique strengths can be used to support your people and grow your business.

Whether you're looking to implement SharePoint for the first time or to migrate your existing version to the latest release, Data-Core has the capabilities to support your initiative.

Azure Cloud

Small-and medium sized enterprises (SMBs) want the power and flexibility to run their business anywhere. That's why they are turning to the cloud to help move their business forward.

Microsoft Azure offers agility along with an open cloud platform, helping you grow your business with greater efficiency and be more responsive to change. With Azure, you can quickly get up and running, scale up or down as needed, and avoid high capital costs — paying only for what you use. Azure also works seamlessly with other Microsoft software and services, such as Windows Server, SQL Server, Exchange and SharePoint, helping you back up and keep your most important company information safe.

Data-Core can help you migrate your existing applications to the cloud or aid in the creation of new applications hosted on the cloud.

Discover the *Data-Core* advantage and see how we can help you.

About Data-Core Systems

Data-Core Systems, Inc. is a provider of information technology, consulting and business process outsourcing services. A proven partner with passion for client satisfaction, Data-Core combines technology innovation, business process expertise and a global, collaborative workforce that exemplifies the future of work. We are a one-stop shop for clients needing breakthrough solutions, including those in mobility, big data and cloud computing.
